

PRESS RELEASE

MOBILE FOAM UNIT ALLOWS RAPID ONE-MAN DEPLOYMENT

A high-resolution version of this image is available electronically from Magna

Among the latest mobile foam generators to be launched by Tyco Safety Products is the MACRON[®]-brand MF140, which is designed for rapid one-man operation, and can be supplied with a variety of branch pipes and inductors. It is ideal for the protection of oil storage and loading terminals; paints or solvent stores; boiler rooms; ships' engine rooms and similar high-risk areas.

The unit requires only a connection to a pressurised water supply and is suitable for all types of foam concentrate. It has a high-strength, corrosion-resistant painted steel frame, a 140-litre chemical-resistant polyethylene tank, and features a large diameter filler cap and maintenance-free, solid rubber wheels.

As standard, the MACRON MF140 comes with a 200 lpm [litres per minute] IND 50 variable foam inductor; a 200 lpm MACRON LX 50 low expansion branch pipe; and two 15-metre lengths of MACRON's 45mm diameter Viking fire hose with instantaneous connectors. However, the MF140 can also be fitted with other MACRON LX branch pipes with matched

inductors to boost the nozzle flow rate from the standard 200 lpm to 490 lpm, and its throw from approximately 23 metres to 29 metres. It can also be supplied with branch pipes from MACRON's MX medium expansion range, when it can also be used to suppress vapours from flammable and toxic liquid spills.

Alternatively, the MF140 can be supplied with water spray branches for use with film-forming foam concentrates, or with hose couplings made to a specific customer's requirements.

Further details on the MF140 are available on MACRON's website at www.macron-safety.com, or can be obtained via email on tspmarketing.emea@tycoint.com, by telephone on +44 (0) 1493 417600, or by fax on +44 (0) 1493 417700.

END
